About this document. A page-by-page walkthrough of the clickable prototype's core screens, rendered in the **Calm** theme. The live prototype also ships **Sage** and **Focus (dark)** themes, switchable in-app.

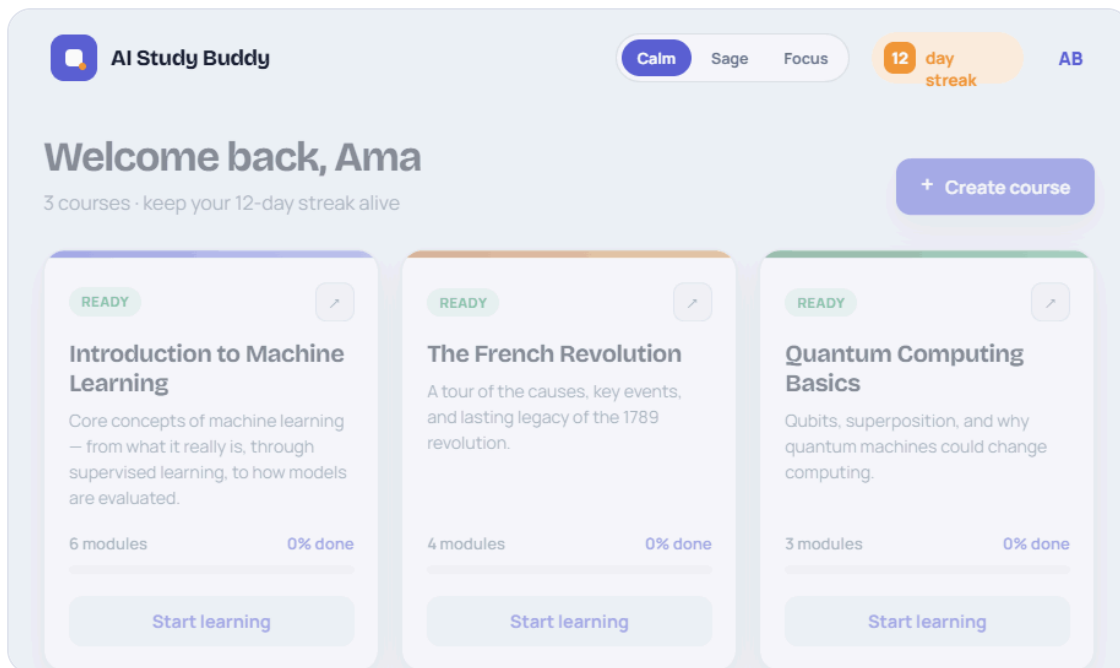

The user journey

Seven screens trace the full path a student takes — from first sign-in, through generating a course with AI, to studying lessons and quizzes and extending their daily streak. Each caption maps the screen to the functional requirements in the project documentation.

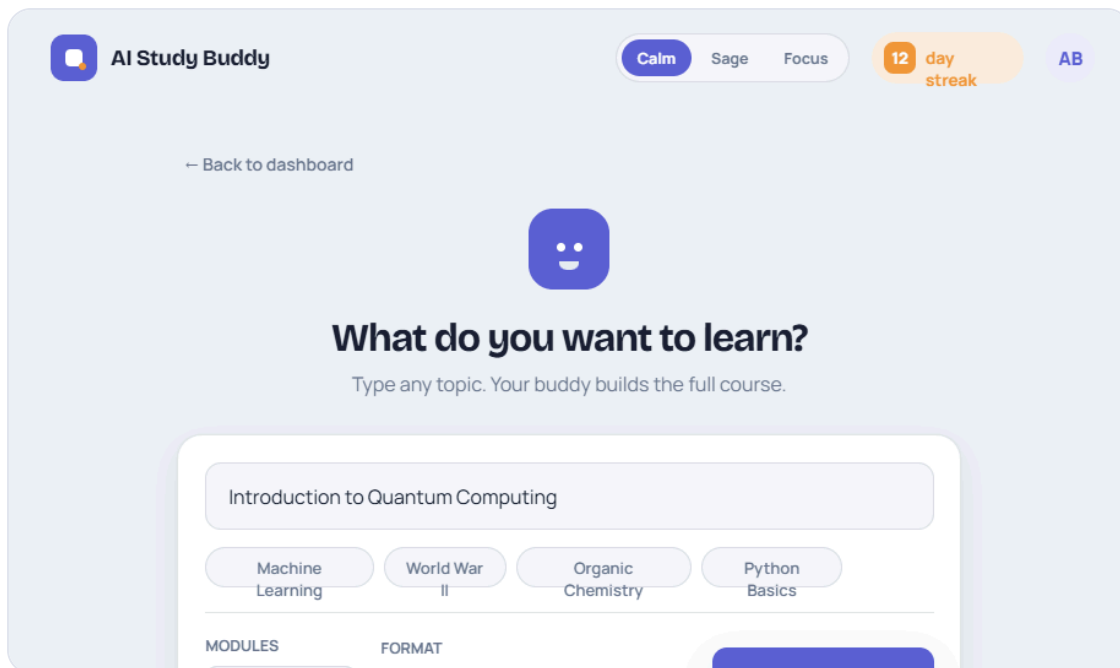

01 • Sign in & sign up

Multi-provider authentication — email/password and Google OAuth single sign-on — with the theme switcher available before login. **FR-01**.

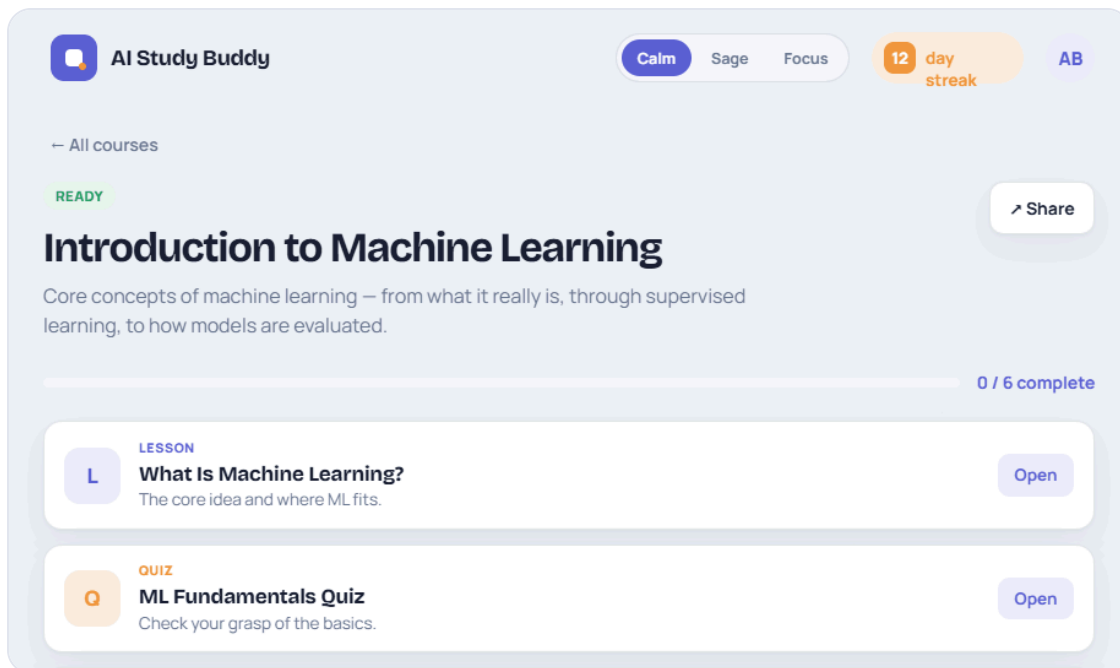

02 • Dashboard

The student's course grid with per-course progress and the persistent daily-streak counter in the header — the gamification hook that drives return visits.

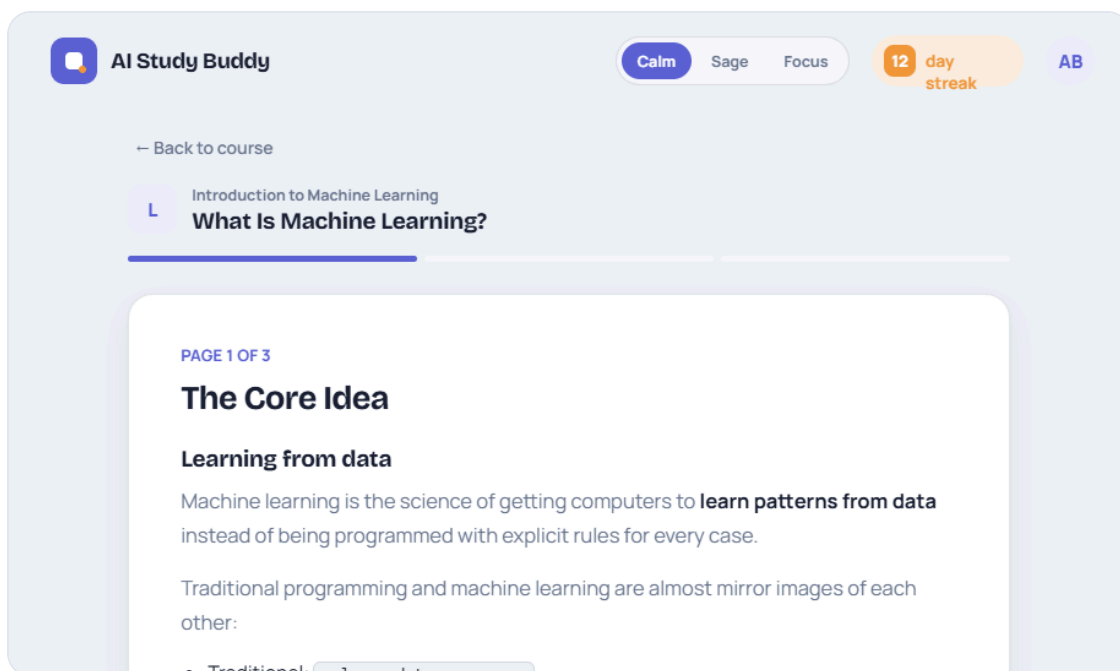

03 • Create a course

A single topic field, sample suggestions, a module-count selector, and a lessons-plus-quizzes / quizzes-only toggle feed the generation pipeline. **FR-03**.

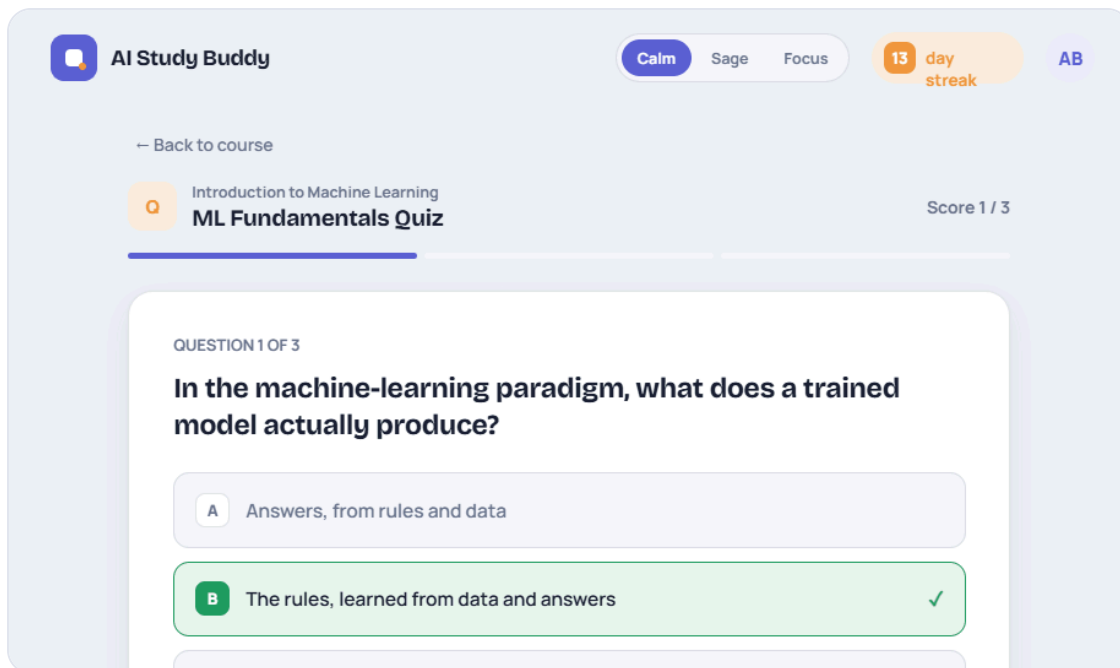

04 • Course view & real-time building

Module rows with lesson/quiz badges and status. When a course is generated, the skeleton appears instantly and modules populate live as the serverless workers finish. FR-04, FR-05.

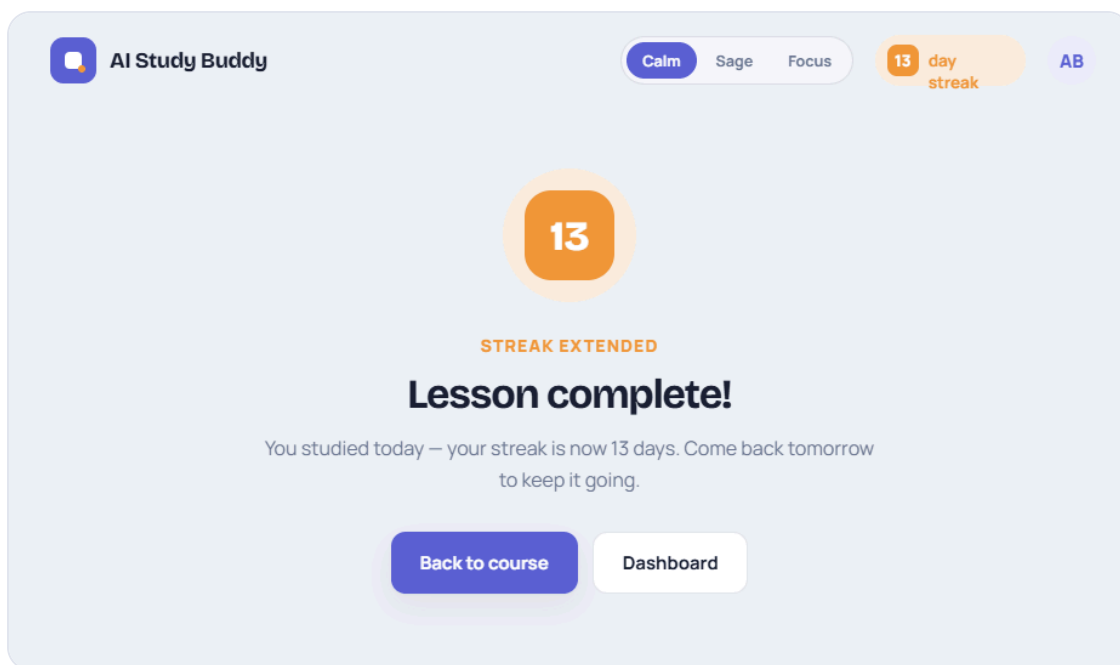

05 • Lesson reader

Multi-page, markdown-rendered lesson content with page-progress dots and previous/next navigation. FR-06.

06 • Interactive quiz

Multiple-choice questions with immediate right/wrong feedback, an explanation, and a running score. The selected correct answer is highlighted in green. **FR-07.**

07 • Module complete & streak celebration

Finishing a module marks it complete and, on the first study of the day, extends the streak — the atomic streak update surfaced as a rewarding moment. **FR-08.**

Also in the prototype — course sharing

From any course card the student can generate a shareable link. Opening it clones the full course — modules, lessons and quizzes — into the recipient's own account via the `sharedCourses` collection in Firestore. **FR-09**.
